

I have a text guide on how to do it all on my website here: to uninstall MAME on Windows XP AND run it on Windows Vista. When I log into Windows Vista and switch back to Windows XP, MAME loads again in the background and still works. I tried running MAME again using the command line (cmd.exe) but that didn't give any process related entries. I also tried running MAME through the task scheduler but nothing happened. I only have one MAME (which I installed earlier on Windows XP) and I don't know how to do it on windows vista.
