Current Version: Windows Vista Windows 7 Windows 8 Windows 8.1 Windows Phone 7 Windows Phone 8 Windows Phone 8.1 Windows 8.1 Phone Windows Phone 8.1 Silverlight Windows Phone Silverlight Windows Phone Silverlight 5 Windows Phone Silverlight 4 Windows Phone Silverlight 3 Windows Phone Silverlight 2 Windows Phone 7.1 Windows Phone 7.5 Windows Phone 7 Silverlight Windows Phone 7.5 Silverlight Windows Phone 7 Silverlight Windows Phone 6.5 Windows Phone 6.5 Silverlight Windows Phone 6 Silverlight Defines a dialog that can be used to ask a series of questions to the user. The dialog must implement the IDialog interface and the result can be output to a string by calling the Prompt() method. The Prompt() method accepts two parameters. The first is a question to the user and the second is a default answer to the question. As an example to ask the user for a password the Prompt() method would be called with the following code: userInput.Prompt("Password?", "Enter your password:", null); The SimpleDialogType enumeration is used to identify the type of dialog that is being created. Use the dialogType property to identify the type of dialog that is being created. The user can view the options that are available for a specific type of dialog. To get the options for a specific dialog type use the DialogType property. The following code gets the options for the SimpleDialogType enumeration. userInput.DialogType = SimpleDialogType.OpenFile; userInput.DialogType = SimpleDialogType.SaveFile; userInput.DialogType = SimpleDialogType.Folder; Use the controlType property to identify the type of controls in a dialog. By default a dialog contains five simple controls: the prompt, ok, cancel, label and button. The controlType property can be set to anything that implements the IDialogControl interface. If a string is passed into the controlType property the string is used to get the controls from a list of controls. For example if the userInput.DialogType is SimpleDialogType.Folder and the controlType property is set to Folder then the following code gets the controls for a folder dialog. List items = new List(); items.Add(new

KEYMACRO is an advanced replacement for the KEYMACRO IDE tool, which is now built into Visual Studio. However, KEYMACRO was never really intended to be used as an IDE replacement. It has a few more features than the IDE version, but it is designed to be used in one of two ways: Integrating KEYMACRO into your development workflow or using the IDE version as a template for a dialog you have created. Additional Features: Code Snippets: Create custom key/shortcut snippets for your favorite IDE plugins Rename key/shortcuts: Quickly rename all key/shortcuts to comply with the naming standards of your project Select from a list: List all available key/shortcuts and make them active for a given project Toggle toolbars: Enable/disable the toolbar of your choice when the application is run from the IDE, or make it active for a specific project or set of projects Fixed Text: Save space and let developers use the space they need for content Date Formatter: Show the date in your favorite format Custom Formatter: Use your own formatter Registry Settings: Enable/disable registry settings for the dialog (folder view, toolbar, etc.) Multiple Translations: Easily switch between translated languages (not in English by default) Marked Files: Highlight all files that match your search criteria Custom Source Code: Apply custom code snippets to files in your current project Image Editor 2.5.1.3 The new Image Editor component by Luma is an Image Editor for the .NET Framework, a powerful image editor component that you can easily add to your applications and websites. The editor is highly customizable with over 2000 options, including custom toolbar layouts, different paint brushes and... ... LuhnCheck is an interactive WinForms calculator for generating and verifying mathematical checksums. It includes several built-in checksums (Luhn, Sade-Grahn, McRae-Forak, Lucas-Lehmer and Lucas-McRae) and a list of over 1000 commercially-used MD5 hashes (including MD5, SHA-1, SHA-256, and SHA-512) as external archives. Description: ... DugasGUI is a highly flexible WinForms GUI toolkit for the Windows operating system, allowing rapid development of GUIs using a visual style similar to that of Windows (XP and later) operating systems. It is heavily inspired by MFC and created for the sole purpose of aiding rapid GUI development. The main functionality of the toolkit is to define GUI elements as templates and then bind data to these elements. Description: ... On Mono, PInvoke can be used as a matter of course, but using .NET Framework interop is quite simple. Description: C# interop is far more complex than PInvoke, because the .NET Framework security has to be traversed. .NET Framework developers are therefore not as familiar with .NET Framework methods than with C# methods. Besides the usual types like object and string, even Array is a .NET Framework type. ... The ListView and TreeView classes are two of the most powerful control classes available for WinForms. Both classes are used to display hierarchical data in a way similar to the familiar Windows Explorer and File Explorer and provide many other useful features. ListView is the classic two-dimensional List view control. It is most frequently used to display a list of items, but also supports multiple columns and rows. Description: ... It is not always easy to write reliable unit tests for a WinForms application. If you were to try to verify a method in your code and later realize that the method does not depend on a method in your unit test project, you may find it difficult to write a unit test for this method, unless you can add the same kind of WinForms dependency in your test project. Description: ... The WPF TreeView control is a control that can be used to display hierarchical data in a way similar to the familiar Windows Explorer and File Explorer. It is built in WPF and is easy to use in WPF applications.

Neymar is unlikely to be fit to face Liverpool in the Champions League on Tuesday night after suffering a slight thigh strain during PSG's 3-1 win over Monaco, the club's director of sport, Rudi Garcia, has said. The Brazilian was forced off before half-time of the 2-0 win over the Monaco on Tuesday and will miss the Champions League clash with Liverpool, which is live on BT Sport 1 from 8.15pm. The forward will be assessed by the club's medical staff after the win and there is hope he will be able to be available for the league fixture against Monaco on Sunday. Neymar in tears after missing penalty to make it 3-1 for PSG in Champions League Read more "Neymar went off because he felt a muscular problem during the match against Monaco," Garcia told Canal Plus. "He is going to be tested. He has a muscle problem in his thigh. It is a small, but very muscular problem." PSG were 3-0 up with 10 minutes remaining when Neymar was injured and Garcia added: "It's going to be difficult but we will take every opportunity to heal him. He is not in the best condition because of the muscle problem. "We will test him in the best possible way and I am not worried. It is a small problem, but we will work with him to get ready. He will be back." PSG were outstanding at the Parc des Princes, with a hat-trick from Edinson Cavani and a goal each from Presnel Kimpembe, Gonçalo Guedes and Adrien Rabiot securing a sixth successive win. "It was a great performance," said Garcia. "The team played like a unit, like always. Cavani gave us everything he had, it was an awesome performance. "The fans were amazing. They were chanting, the atmosphere was fantastic. It is a special night for us. We won without conceding a goal, that is never easy to do." Monaco had the wind at their backs, but the visitors would have been justified in feeling aggrieved at the first-half goal that Cavani netted after just 11 minutes. On the back of recent heroics from Neymar, the Uruguay international plundered the ball past
