MIDI Learn mode: Pitchwheel can receive MIDI control messages, to be executed by any software or hardware MIDI instrument. Pitchwheel was designed to be a VST plug-in that will change the pitch of a sound without changing it's length. It has a large, easy to use dial and simple parameters making it a fast and creative effect unit. It has a range of two semi-tones to two octaves, which gives you control from subtle tuning changes to wild swings of pitch. The user pointer acts as a desired pitch change, and the actual pitch is produced by smoothing and inertia controls. Pitchwheel moves towards the desired pitch at sample accuracy, enabling nice transitions without stepping. A DJ turntable feel can be created with some play, but the difference here is that the tempo remains the same, so your track can go on without sequence timing changes.
