Lol, don't beat yourself up over the fact that you posted a review for the product, despite the fact that you don't actually own it. And then you tried to ram it down our throats, basically telling us to go get it even if we didn't like the idea. It's petty and just really shows a lack of character. If anything, we should praise you for your honesty. Useful Searches About DroidForums.net

Cyclone Dayae Severe Tropical Cyclone Dayae was a highly destructive Category 4 cyclone that affected Vanuatu in February 2017. Dayae was responsible for the deaths of at least 67 people in Vanuatu, all of whom were killed by Cyclone Bebe, and caused extensive damage to properties in the country. It is considered to be the deadliest tropical cyclone on record in Vanuatu.

Meteorological history The system began as a disturbance within the monsoon trough on February 1, 2017, while located about to the east-southeast of the island of Espiritu Santo in Vanuatu. The initial disturbance gradually developed within a low-level warm oceanic environment, and by February 3 the system developed into a tropical low, classified as Tropical Disturbance 05. The Joint Typhoon Warning Center (JTWC) issued a Tropical Cyclone Formation Alert on February 3, with the system beginning to develop a banding-like appearance due to an increase in convection. At this time, the low was situated within an area of marginally strong wind shear, allowing for continued development. Late on February 3, the Japan Meteorological Agency (JMA) classified the low as a tropical depression. It subsequently intensified into a tropical storm, with the JMA upgrading Tropical Disturbance 05 into Tropical Storm Dayae, while the JTWC issued a final advisory. On February 5, the JMA upgraded Dayae into a severe tropical storm, with the JTWC upgrading it

Sync options Synchronization with atomic time servers can be customized by picking one of the many available services, with dedicated settings to automatically adjust time at a user-defined interval. Bottom line All in all, DS Clock is just a simple desktop clock with synchronization options, but it still needs major improvements when it comes to the way it looks. More customization settings and skin support would definitely attract more users.
